

GP·PU Progress report May 2019: Numerical calculation of open quantum systems

Masaaki Tokieda (時枝 正明)

In the first half of the report, I would like to inform about the current status of credits and some experiences in the previous semester.

In the later half, I would like to talk about how my research is going. I have focused on some numerical methods, which are developed to solve open quantum systems, and that effort has finally paid off in the previous semester.
