Research Plan

GPPU points I have now: 3 (1 GSP + 2 GASP)

To complete my master course, I need to attend GPPU seminars and GPPU schools.

Till now I have attended 3 GPPU seminars and received 3 GPPU points. To reach the requested 10 points, I need to attend 7 more GPPU seminars this semester. Also, I have attended one GPPU mini-school, so I plan to attend another one in this semester.

In doctoral courses, I need to get points in GPPU experimental courses and GPPU seminars.

From this semester, I'll start register for experiments. I think I need to take 4 experimental courses. In 2020 and 2021, I plan to register for 1 experiment. Then in 2022, I will register for 2 experiments to get all points I need in experimental courses.

About GPPU seminars, I will attend as many seminars as possible to get enough points.

Also, I need to have 3 months' oversea research experience to get the GPPU degree.

1. There is a TMT workshop aiming at training potential researchers for TMT project. This workshop holds every year (except for this year due to coronavirus) and I was accepted for this year's workshop. I will apply for it again next year. (Time: 1 week)
2. A conference about cluster is postponed to 2021 summer due to coronavirus, I also plan to attend this conference and make an oral presentation. (Time: 1 week)
3. I planned to visit my supervisor's collaborator Prof. Almani (University of Nottingham) in October and November this year, and work together with their group on spectra reduction. But this plan is likely to be postponed to 2021 when the situation in UK gets better. (Time: 2 months)
4. I will attend other conferences and make presentations as well. I plan to attend 1 or 2 international conferences every year.
